Why Customers Partner with Grafana Labs

Your Open & Composable Observability Stack
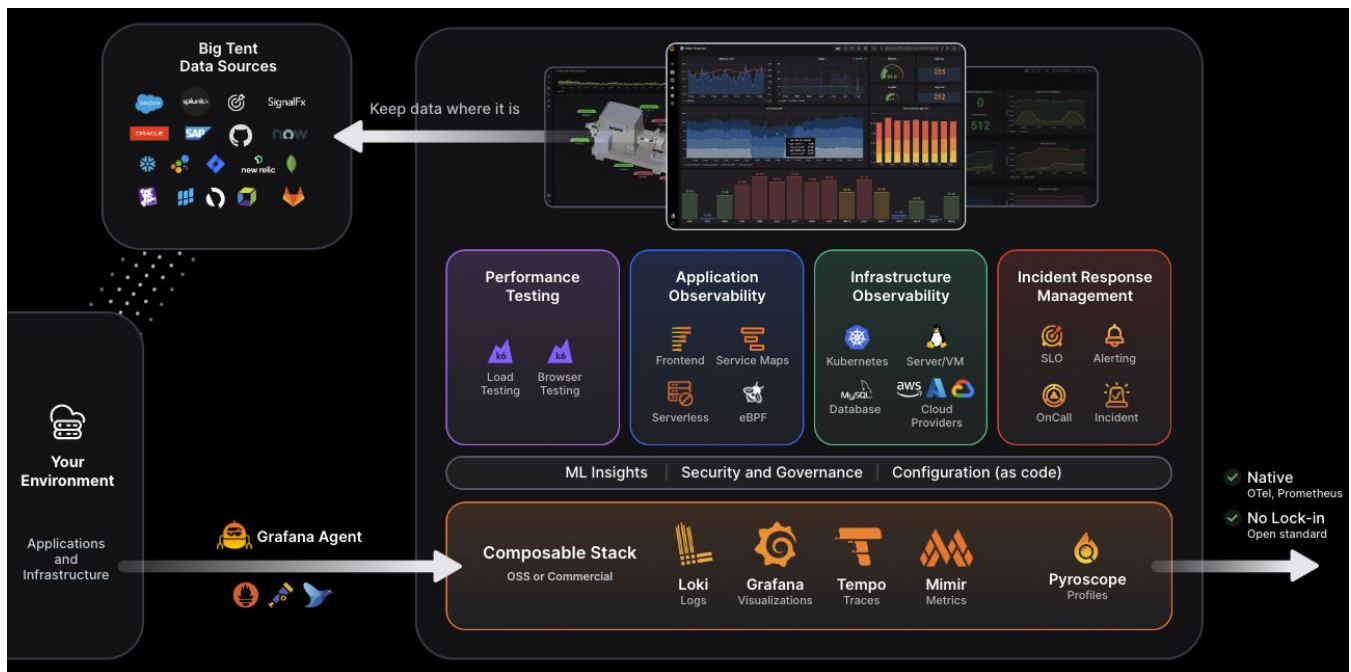

Customers choose Grafana Labs for these unique reasons:

Consolidate without migration. We provide a "first pane of glass" common starting point in their observability journey, enabling you to unify siloed tools, teams, and data without requiring the heavy lift of data consolidation.

Reduce vendor lock-in. We bring expertise and technology in key open source projects Loki, Grafana, Tempo, Mimir (LGTM), Prometheus, and OpenTelemetry to help you future-proof your investments and reduce lock-in.

Centrally operate and optimize costs. We help you manage and optimize costs, provide the right levels of security and governance, and help you manage consistent configurations for all your users and developers with as-code deployments.

Move fast (without losing context). We deliver integrated experiences to help you catch issues before they reach production: load testing integrated with observability telemetry, unique integrated application and infrastructure correlation/context, and IRM workflows integrated directly in your observability data.

About Kanari Group

At Kanari we offer observability with a business mindset. We specialize in providing businesses with new monitoring and observability technologies and enabling them to utilize them to their fullest extent—maximizing ROI and user satisfaction while minimizing business-critical risks. At Kanari, Grafana is used to provide real-time monitoring and analytics for IT systems, helping teams visualize metrics, logs, and traces. With its customizable dashboards, Grafana offers a unified view, enabling data-driven decision-making.

Grafana Labs is the only vendor that helps you avoid vendor lock-in. Learn more
